Each entry is a **SKILL.md-style instruction package** that ships in a public repo: a curated workflow, not a one-shot prompt. We prefer skills that compose with the Claude Code primitives (`CLAUDE.md` , Hooks, Subagents, MCP) over isolated snippets.

Source URLs were verified individually on the date this guide was published. Where a skill belongs to a curated collection (Superpowers, awesome-claude-skills, awesome-claude-code), the source links to the maintainer's root repo — that's the durable entry point. Skills without a verifiable upstream show `no upstream link` rather than a placeholder.

This is not a Top-N ranking. There are no download counts, star counts, or vendor relationships behind the order. Filter by category, scan for what fits your stack, wire it in.
